

# Kate Dubouskaya

Front-end developer

Age: 27

Email: [rinawwwster@gmail.com](mailto:rinawwwster@gmail.com)

Github: <https://github.com/Kaciaryna/>

## Major Skills

### Programming Languages

#### *HTML5 / Haml*

Writing HTML I try to stick to semantic markup, to use the possibilities of HTML5. Also I like the idea of microformats, most ideas of BEM (Block-Element-Modifier - breaking the page into independent blocks and reuse the code where it's possible).

#### *CSS3 / Sass / Scss*

Working with CSS I especially like using preprocessors like Sass or Scss, that give a developer a lot of useful tools to solve the problems faster and produce cleaner, more readable code. Variables, mixins, functions are great help when you need to write a large stylesheets with thousands of css rules.

Nowadays, possibilities that offer us CSS3 are irreplaceable and can help to realize almost every wish of a designer or a client. I like to use the features of CSS3 in projects. For example, CSS3 media queries are great when there is a task to make the responsive design. Box-shadows and border radiuses are a front-end developers' nightmare without CSS3!

#### *JavaScript / CoffeeScript*

I like JS and can write some code in pure JS or using frameworks, like jQuery. Most problems that I solved using JavaScript referred to client interfaces.

## Technologies

*Server-side frameworks:* Familiar with Ruby on Rails and Sinatra (as front-end developer)

*Client-side:* HTML/HAML, CSS/SASS, AJAX, jQuery, Backbone

*CVS:* Git, SVN

*Image editors:* Adobe Photoshop, Pixelmator

*Other:* Semantic markup, microformats, adaptive and responsive design  
jQuery UI, jQuery plugins development

---

## Major Projects

### The Honest Company (US)

02/2014 → present

Honest.com is a subscription based internet shop of diapers, wipes, organic cosmetics, home cleaning products, etc.

My responsibilities embrace dealing with CSS (**Sass**) and html (**HAML**) using **Bootstrap** to manage the responsive design, as well as writing jQuery to maintain small interactive parts.

**Altoros Development (Belarus) / ShoeDazzle (US)**

06/2012 → 12/2013

As a member of huge international team took part in development of ShoeDazzle.com site and its mobile version.

ShoeDazzle is a big internet shop (written on Ruby on Rails) of shoes, handbags and accessories with a large client base in the USA.

As a HTML coder I dealt with CSS (**Sass**, SCSS) and html code mostly. During my work in ShoeDazzle team site was fully redesigned - that means, that almost all CSS and HTML code was rewritten or largely optimized. A lot of **CSS3** and **HTML5** features were used in redesign. As for old browsers, was decided to drop support of IE7, and to use graceful degradation for IE8,9 (to show the complicatedly designed elements simpler for these browsers).

The practice of a/b testing was used on ShoeDazzle. That means that the same page could have been shown differently to different users and the developer should make it look good for everyone. Git was used to maintain version control.

*Supported browsers: Chrome, Firefox, Safari, Internet Explorer 8+*

**Altoros Development (Belarus)**

04/2012 → 06/2012

I participated in development of mobile version of site for Fireplaces.com. My work included writing HTML and CSS code on the base of PSD templates, testing my work on iphone and android devices. I used **tortoiseSVN** - a utility to work with **SVN** version control. The primary goal was to make the mobile site **responsive** - to look good on iphone, ipad and various android devices, that was achieved with the help of **HTML5** and **CSS3** features.

The main structure of HTML should have been designed to be able to be greatly customized for different brands with the use of CSS. My task was to write the code that can be easily reused for various brands with the minimum HTML changes.

The main difficulty on this project was to test the code on variety of android devices, mostly to get all the needed devices.

*Supported browsers: Mobile safari on iphone, default browser on android*

**Altoros Development (Belarus)**

03/2012 → 04/2012

I took part in the development of new Altoros site - welcome.altoros.com. This site is less serious analog of Altoros.com site. My task was to apply design to **WordPress template**, adjust plugins for facebook, twitter, manage plugins for navigation.

*Supported browsers: Chrome, Firefox, Safari, Opera, Internet Explorer 7+*

**Altoros Development (Belarus)**

02/2012 → 04/2012

Worked on the optimization of Altoros sites (altoros.no, altoros.dk, altoros.com). Among my responsibilities were updating of HTML code and styles according to the changes in design and functionality, optimization of CSS code and images, working with **Joomla admin panel**.

*Supported browsers: Chrome, Firefox, Safari, Opera, Internet Explorer 7+*
